

Practical – 4: Develop a Simple Calculator Application using Flutter.

main.dart

```
import 'package:flutter/material.dart';
import 'pages/calculatorscreen.dart';

void main() {
  runApp(const MainApp());
}

class MainApp extends StatelessWidget {
  const MainApp({super.key});

  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      title: 'Calculator App',
      home: CalculatorScreen(),
    );
  }
}
```

Calculatorscreen.dart

```
import 'package:flutter/material.dart';

class CalculatorScreen extends StatefulWidget {
  const CalculatorScreen({super.key});

  @override
  State<CalculatorScreen> createState() => _CalculatorScreenState();
}

class _CalculatorScreenState extends State<CalculatorScreen> {

  final TextEditingController _firstNumberController =
    TextEditingController();
  final TextEditingController _secondNumberController =
    TextEditingController();

  double _result = 1;

  void _add() {
    setState(() {
      final firstNumber = double.tryParse(_firstNumberController.text) ??
0;
      final secondNumber =
double.tryParse(_secondNumberController.text) ?? 0;
      _result = firstNumber + secondNumber;
    });
  }

  void _subtract() {
    final firstNumber = double.tryParse(_firstNumberController.text) ??
0;
    final secondNumber =
double.tryParse(_secondNumberController.text) ?? 0;

    setState(() {_result = firstNumber - secondNumber;});
  }
}
```

```
void _multiply() {  
    final firstNumber = double.tryParse(_firstNumberController.text) ??  
    0;  
    final secondNumber =  
double.tryParse(_secondNumberController.text) ?? 0;  
  
    setState(() {_result = firstNumber * secondNumber;});  
}
```

```
void _divide() {  
    final firstNumber = double.tryParse(_firstNumberController.text) ??  
    0;  
    final secondNumber =  
double.tryParse(_secondNumberController.text) ?? 0;  
  
    if (secondNumber != 0) {  
        setState(() {_result = firstNumber / secondNumber;});  
    }  
}
```

@override

```
Widget build(BuildContext context) {  
    return Scaffold(  
        appBar: AppBar(  
            title: Text('Simple Calculator'),  
        ),  
        body: Padding(padding: EdgeInsets.all(16.0),  
            child: Column(children: [  
                TextField(  
                    controller: _firstNumberController,  
                    decoration: InputDecoration(  
                        labelText: 'Enter a number',
